We are looking at issues like measured variables

By Leslie G Knipling

I am using this book in support of a National Academy of Science "blue ribbon" committee to review and improve the scientific quality of research on commercial truck and bus driver fatigue. We are looking at issues like measured variables, construct validity, sampling, research design, and causal inference. I have found the book to be extremely helpful. It articulates the requirements for sound science in a way that applies to almost any type of behavioral (and other) research. The book is clear, concise, and rich in content. I am a Ph.D., nearly 40 years post-degree. I wish I had this book 40 years ago! Ronald R. Knipling, Safety for the Long Haul Inc., large truck and traffic safety research

I loved the smell of the new pages in this book ...

By Jerry's Reviews

I purchased this book for my university Research Methods course. This book is not very big so it fits perfectly in my backpack. I bought a used hardcover edition and the cover is very smooth. When I first opened it, I loved the smell of the new pages in this book even though it was used. The book has colorful graphs and data boxes that catch the eye. It contains definitions in a nice, easy to read, color and font. The book is very organized and is easy to navigate through. Although the book is somewhat pricy (\$60 for used, \$120 for new) it was perfect for my course.

God information

By Kris

This is a really good textbook. I needed to purchase it for a class, so I would have bought it anyway, but it is easy to read, and full of great information. The price I bought it for was outstanding too. Other places were charging 5x this price!? I like this textbook so much that I will be adding it to my personal library instead of selling it at the end of the semester.
